

**Detergent**

**Detergent for electronic and electrotechnical applications  
LUKA LK001 KAB**

The LK001 KAB is a high quality and pure solvent suitable for all electronic and electrotechnical applications. The product is moderately fast evaporating, non-conductive or corrosive to the materials used. It easily removes dirt, dust, grease and other common contaminants. It works and does not damage moving parts or electrical connections.

**Specification**

Density	+ 0,75
Durability	unlimited
Flash point	58°C
Breakdown voltage	> 48.000 V

**Delievery options**

1 L	Polyethylene bottle with spraying nozzle PU: 1 box with 12 bottles
25 L	Polyethylene canister with pouring spout
200 L	Polyethylene multibox
1000 L	Polyethylene barrel

The LUKA cleaner LK001 KAB guarantees a high efficacy and is, at the same time, health and ecofriendly. The cleaner LK001 KAB is flame-resistand and completely free of chlorinated hydrocarbons. The filling containers are all made of ecofriendly plastic polyethylene. LUKA uses no propellant without exception. This means that no additional burdens on the environment arise. The LUKA cleaner also offers advantages in terms of economics: since the filling containers can be re-filled again and again, no disposal costs arise.
